Some initial CAD programs started out as graphical design tools, and used either simple outline or vector-based drawing tools. Later, other CAD programs were developed that allowed the user to draw by adding faces to the basic geometric shapes. AutoCAD is written using the Lisp programming language (an older and somewhat obsolete but still very flexible programming language), and includes a variety of tools to ease the drawing process. Its basic interface is similar to that of many other design and drafting software tools, such as Scribe (Mac), MicroStation (Windows), X-Press (Unix), Digital Planer (Linux), HomeCAD and WireCAD (Windows). With the widespread use of portable and laptop computers, AutoCAD is also available as a standalone or multi-user version for Windows and Mac computers. Other operating systems, such as Linux and BSD Unix, can use AutoCAD with a minimum of modification. This article covers AutoCAD from version 11 to 18, which were released from 2002 to 2019. History AutoCAD was developed by a small, tight-knit team of around 10 programmers at Palo Alto, California-based Autodesk, Inc. Between 1978 and 1982, Paul Dailey, a member of the Autodesk drafting staff, was responsible for developing the AutoCAD application. Dailey first began work on AutoCAD by modeling the "cleanup" process—a technique used to "clean up" the basic, standard shape so that it would not appear to have a lot of extraneous details that did not make sense. After a few months of work on this simple task, the concept of AutoCAD was sketched out in an interview. Dailey wanted to develop a general purpose CAD package, rather than a dedicated graphics package, and the first CAD program was based on the idea of having "objects" that could be used to change the outline of any existing object. Later, the application was developed further and an outline module was added, as well as a series of functions that allowed the objects to be changed. Shortly before AutoCAD was released, in the middle of 1982, Autodesk acquired two other small companies, Computer Associates and Criterion Software. Autodesk was able to access the software code for both Criterion and Computer Associates. Criterion's AutoCAD had just reached version 1.0, and it was eventually merged into the source code of the Autodesk version of AutoCAD.

The objective of this project is to determine the precise molecular mechanisms and cellular distribution of alpha-1-antitrypsin (AT) in the liver. We have found that AT is synthesized and secreted by an as yet unidentified, bipotential hepatoblast (stellate cells). The mechanism for its synthesis will be examined by determining the extent to which AT gene transcription and translation are required for its synthesis. Liver cells will be fractionated by sequential digestion with collagenase and pronase, and the distribution of AT in the soluble and particulate fractions will be determined by polyacrylamide gel electrophoresis in the presence of sodium dodecyl sulfate. The presence of AT will be confirmed by immunoprecipitation. Antibodies against AT will be prepared and employed to examine the localization of AT within the liver. The possibility that AT is associated with the cell surface or membrane fractions will be examined by probing the AT containing fractions with 125I labeled anti-AT antiserum. The presence of AT in the intercellular matrix or soluble extracellular fluids will be determined by immunoprecipitation and electrophoresis, and its activity in preventing neutrophil activation will be determined. The mechanism of secretion will be examined by cell fractionation and by the use of inhibitors of the specific cellular transport pathway. The ability of secreted AT to bind with surfaces exposed by activation of leukocytes will be examined by precipitation and autoradiography, and its ability to inhibit neutrophil aggregation will be assessed by turbidimetry.²⁶ * Copyright 2015 - 2016 Red Bull Media House GmbH - all rights reserved. * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * * * Unless required by applicable law or agreed to in writing, software * distributed under the License is distributed on an "AS IS" BASIS, * WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. * See the License for the specific language governing permissions and * limitations under the License. */ package com.rbmtechnology.eventuate.consumer
