Q: How to use TotalLock to run a transaction in Azure SQL Data Warehouse? I'm using an SQL Data Warehouse with a SQL Server Data Integration Services package source. I want to enable TotalLocking to ensure that all transactions run, and will roll back in case of failure. The SQL Server Data Warehouse service in Azure can also access my on-premise SQL Server database, however, I don't see an option to enable TotalLock (or partial locking) on the Azure SQL Data Warehouse. AFAIK there are some additional requirements to enable TotalLock on a database server, can anyone confirm if this is the case for SQL Data Warehouse, and if so, what additional steps are required? A: TotalLocking only works if the table you are locking has the correct IsTotalLock/IsPartialLock columns set to True. If you are using an Integration Services package as your source to get data from, you can't set these columns because they are stored in the source database. Unfortunately, with data warehouses, we currently don't have the option to change this to allow partial locking. We'll be sending this feature request to our R&D team for consideration.

Q: General solution to a PDE I have a question concerning this differential equation $\frac{y'}{y} = \frac{y'}{y}$ which I'm not able to solve. I have had a look at and tried to solve it, but I couldn't get anything further. A: So if you have $y(x)$, we have to find some function $y'(x)$ such that the equation holds. If we use the initial condition $y(0)=1$, we have: $y(x)y'(x)=y'(x)y(x)$ i.e. $y'(x)=y(x)$ or $y'(x)=-y(x)$. The first solution has the form $y(x)=e^{cx}$ and $y'(x)=-ye^{cx}$ so the solution is:
